

Stylish headsets, backed by great technology

Plantronics Discovery™ 665 featuring AudioIQ®

Exclusive to Plantronics **AudioIQ**
calls made clear

AudioIQ: the smartest way to hear and to be heard.

AudioIQ is a new Digital Signal Processing (DSP) technology that is exclusive to Plantronics building on Plantronics' history of innovation and technology leadership.

What does it do when you are talking?

AudioIQ reduces background noise by up to 8dB, so that the person you are talking to can hear you more clearly. (Our competitors can only reduce noise by 3dB to 5dB).

What does it do when you are listening?

AudioIQ adapts the volume of what you are hearing according to the 'sound-environment' you are in. So, if it's noisy, it increases the volume. If it's quiet it sets the volume accordingly. AudioIQ also improves call-quality by cleaning up degraded far-end call quality.

The best way to explain it:

If you listen to music in your car, you'll know that you have to constantly adjust the volume, because the background noise depends on how fast you are driving. AudioIQ makes the adjustment automatically therefore ideal for a mobile professional on an important call.

If the noise around you is louder, you need a bit more volume when you are listening. But you also need the background noise eliminated when you are talking – and Plantronics headsets featuring AudioIQ do this 100% more efficiently than our competitors.

Bluetooth® (all products featured in this leaflet are Bluetooth enabled)

Bluetooth wireless technology is a short-range communications technology intended to replace the cables connecting portable and/or fixed devices while maintaining high levels of security. The key features of Bluetooth technology are robustness, low power, and low cost.

AcuSpeak™ (Pulsar 260)

Headsets featuring AcuSpeak technology are ideal for people who work in noisy environments, because the intelligent microphone selects only the human voice, cutting other sounds out of your transmission.

Audio Line Out (Pulsar 260)

Stream music from your Bluetooth stereo phone to your powered speakers for public listening.

Multipoint

(Discovery 650, Voyager 510, Voyager 510 USB, Pulsar 590A & 590E, Pulsar 260)

Most wireless devices use point-to-point, which means they can only be connected to one device at a time – for example a mobile phone and a Bluetooth headset might be connected through point-to-point. Or a PDA device might be paired with a computer.

When a headset has multipoint capability it can receive information from more than one device at the same time. So, for example – with the Plantronics Voyager™ 510 USB you can answer and make calls from either your PC Softphone or your mobile handset (Mobile device must be Bluetooth enabled).

Noise-cancelling microphones (Voyager 510 and Voyager 510 USB)

Plantronics' noise-cancelling microphones reduce the background noise and so enhance the accuracy of the sounds being transmitted. They are ideal for noisy environments.

Sidetone (Discovery 665)

Sidetone technology gives natural feedback so that what you hear is exactly the same as what the person you are calling hears – this is especially valuable if there is background noise, as it acts as a warning that the person you are calling may not be able to hear you clearly.

WindSmart® (Voyager 510 and Voyager 510 USB)

Plantronics' patent-pending WindSmart technology uses a specially designed material over the microphone to diffuse wind noise, so that even in windy environments – such as the car or the street – users can enjoy crisp, clear conversations.

Pairing Information

Before using your headset for the first time, you must pair it with your Bluetooth phone or device. Ensure that the headset is fully charged.

QuickPair™

Plantronics have developed QuickPair technology, featured in the Explorer 220, the Discovery 650 and the Discovery 665 to make pairing the headset with a Bluetooth phone even easier.

When you first switch on the headset it will automatically go into pairing mode for an extended period, flashing red and blue. Refer to the additional information below to complete the pairing.

NOTE: You normal only need to pair the headset and handset once. If headset has been previously paired with another device, please follow normal pairing instructions below.

Plantronics Explorer™ 220, 330, 340 and 350	Plantronics Voyager™ 510 & 510 USB
<ol style="list-style-type: none"> Press call control button for 6 secs and release when indicator light flashes blue and red. While the headset is flashing, use the phone menu to search for Bluetooth devices and select "2xxPlantronics" (a) or "3xxPlantronics" (b). When prompted for passkey enter 0000. Headset will flash blue when paired successfully. 	<ol style="list-style-type: none"> Simultaneously press the listen volume adjust button marked + (volume up) and the call control button. Release the buttons when the indicator light begins to flash red then blue. While the headset is flashing red and blue, use the phone menu to search for Bluetooth devices and select "510 Plantronics". When prompted for password, enter 0000. The headset will flash blue when paired successfully.
Plantronics Discovery™ 610	Plantronics Discovery™ 650 and 665
<ol style="list-style-type: none"> With your headset turned off, hold down the call control button until the headset status indicator briefly glows blue, then flashes red and blue. The headset is now in discovery mode and will stay that way for 120 seconds. On your phone, highlight and select "Look for Devices," or equivalent, to activate the scan for the headset. When the phone display shows the scan results, select "6xx Plantronics". The phone will continue to search for the headset. When the phone display asks for a passkey, type "0000" and press Enter. Your headset is now linked to your phone. 	<ol style="list-style-type: none"> With your headset turned off, hold down the call control button until the headset status indicator briefly glows blue, then flashes red and blue. The headset is now in discovery mode and will stay that way for 120 seconds. On your phone, highlight and select "Look for Devices," or equivalent, to activate the scan for the headset.
